

# Digital Check Introduces SmartSource Adaptive 2.0 Multi-Function Scanner

*Updated Device Brings Higher Speed to Mixed-Batch Check and Document Scanning*

**Northbrook, IL** – Digital Check Corp.’s new SmartSource Adaptive 2.0 scanner is now available for general purchase, delivering a significant performance boost for financial institutions and other businesses that need to scan checks and other full-sized documents together in a single batch.

The Adaptive is a multi-feed scanner with an oversized feed tray that can accommodate documents of all shapes and sizes, from ordinary checks to full legal-sized pages. Checks and other documents can be scanned all at once and intelligently sorted to keep payment records together with accompanying information for a wide variety of business purposes.

Upgrades to its memory and processing power allow the Adaptive 2.0 to achieve a maximum speed 50% higher than its predecessor, as well as significantly improving performance with mixed batches. The new Adaptive can reach 105 documents per minute (DPM) when scanning checks only, compared with 70 DPM for the original. For checks and full-page documents mixed together, the Adaptive 2.0 nearly doubles its precursor’s top speed, achieving 78 DPM compared to 40 DPM previously.

“Many professions generate lots of auxiliary paperwork that needs to be captured along with every payment – but until recently, had few options for dealing with both at the same time,” said Rick Ooten, Digital Check’s Vice President of Product Management. “The SmartSource Adaptive was one of the first to address this niche in the field, and by making a few inexpensive enhancements to modernize its components, we’ve upgraded it to a world-class multipurpose scanning device.”

Among other fields, the SmartSource Adaptive has enjoyed success in the medical, legal, real estate, and insurance professions, as well as many others where invoices or other records often accompany payments. It has been integrated with numerous banking, bookkeeping, and other record-keeping systems in the U.S. and many countries around the world.

For more information about the SmartSource Adaptive 2.0, please contact your Digital Check account representative or call (847) 446-2285.

## **About Digital Check**

Digital Check provides superior check scanners and document capture products for teller capture, branch automation, remote deposit capture, and remote lockbox

applications. Digital Check's award-winning CheXpress<sup>®</sup>, TellerScan<sup>®</sup>, BranchXpress<sup>®</sup>, and SB Series<sup>™</sup> check and document scanners are among the most cost-effective and reliable in the industry. With the addition of the SmartSource<sup>®</sup> line of check scanners and peripherals, Digital Check is now the largest dedicated manufacturer of check scanning equipment in the world. The company also provides software solutions for image quality, vault processing, and remote monitoring and geolocation tracking of check scanners across an enterprise.
