

Integrated Bank Technology and Thillens Service Corp. Announce Strategic Partnership

--New partnership will make solution available to more financial institutions--

CHICAGO, JULY 30, 2008 – Integrated Bank Technology (IBT) and Thillens Service Corp., a Chicago-based third party processing company, announced that the companies will partner to offer IBT's remote deposit capture product to Thillens customers. IBT specializes in engineering robust software applications and provides 24/7 support services to community financial institutions, so this partnership will make IBT's remote deposit capture available to a wider array of financial institutions.

"We have been searching for a remote deposit capture product for about two years and after reviewing the offerings of four or five companies, we selected IBT," Mel Patrick Thillens, vice president at Thillens Service Corp., explained. "The simplicity of the interface, ease of use and cost effective structure of IBT's product made it the best choice for our company, and we are pleased to offer it to our customers as they make the move from legacy check processing to remote deposit capture."

Remote deposit capture will enable financial institutions that work with Thillens to enhance their customer service by allowing them to remotely scan their deposits at any time. Additionally, if a correction needs to be made during the scanning process, the institution can immediately address it, rather than waiting for all of the checks to be scanned. As time and gas continue to be premium resources, Thillens is providing the leadership for its' customers through the flexibility that IBT's remote deposit capture offers.

"Thillens Service Corp. has a strong and successful history dating back to 1932," Mike Golebiowski, president at IBT, said. "We are excited to partner with them and address this critical need that community financial institutions have to install and support new technology while remaining within the constraints of their budgets. Between the extensive product knowledge and innovative solutions offered by both IBT and Thillens, financial institutions will have one source for a full suite of products from logistics, to software, to the core system."

About Integrated Bank Technology

Cedar Park, Texas-based Integrated Bank Technology (IBT) provides software applications and support services to community financial institutions across the country. The company's flagship product, Integrated Bank Environment, is a robust software application that is designed to enhance a financial institution's overall customer experience while making the cost of ownership affordable.
